An Immunological Study of the Protein Fractions Title

of Directly Altered Bacteria of the Intestinal

Group

Zh. mikrobiol., epidemiol., i immunobiologii, 1955, Orig Pub:

No. 8, 20-30

The antigen structure of intestinal bacilli, Abstract:

Breslau paratyphous bacteria, alkali-formers obtained by the cultivation of intestinal bacilli in a culture of Breslau bacteria killed by heating, and paratyphoid obtained by the cultivation

Card 1/5

USSR /Microbiology. Medical and Veterinary Microbiology.

F-6

Abs Jour: Referat. Zh.-Biol., No. 9, 1957, 35644

of alkali-formers also in a culture of Breslau bacteria killed by heating, was studied by the method of immuno-chemical analysis. By means of a selection of colonies of named variants and their successive strengthening, strains were obtained, the properties of which when preserved in a semifluid agar (pH 7.4) under vaseline oil, remained unchanged over a period of 6 years. From a microbe mass obtained by means of a washing of a 20-hour agar culture, after treatment with alchohol and ether, nucleoproteids were extracted with the help of 0.14 and 1 M NaCl, and proteins of the non-nucleoproteid type by alkalies. The remainder of the bacterial bodies consisted of proteins with the exception of alkali-formers, which contained also a great quantity of matter of

Abs Jour: Referat. Zh.-Biol., No. 9, 1957, 35644

were subjected to a fractional precipitation successively with acetic acid, alcohol and acetone. In alkali-formers the fractions of nucleoproteids and neutral proteins precipitated by acetic acid and which are characteristic for three other strains were completely absent. The alcohol soluble protein precipitated by acetone from the salt extract of 0.14 M NaCl, in intestinal bacilli is not at all apparent, in alkaliformers is weakly represented, becomes more apparent in paratyphoids, and is evident much more in the control Breslau culture. Rabbits were immunized with the nucleoproteid and protein preparations received by fractionization and their serum

Card 3/5

F-6

Abs Jour: Referat. Zh.-Biol., No. 9, 1957, 35644

was studied in the crossed reactions of precipitation with all the fractions of each of the 4 strains in order to determine the general and specific antigens entering into them. Indicating the genetic bond between the intestinal bacilli and the Breslau bacteria is the presence of group antigens in the majority of their fractions and the presence in paratyphoid bacteria of antigens specific for intestinal bacilli. The fraction of alkali-formers, defined as a residue, contains antigens specific to intestinal bacilli, paratyphoid bacilli, paratyphoid and alkali-formers. In the complex of the fraction of alkali-formers of a one-molar extract containing DNA, an antigen was exposed which was specific to paratyphoid bacilli and paratyphoid. One of the alkali fraction

Title : Cytomorphological Features and a Method of Obtaining L-Forms of Typhoid Bacteria.

Orig Pub : Zh. mikrobiol., epidemiol. i immunobiologii, 1957, No. 5, 38-43

Abstract: L-forms are successfully and regularly obtained from cultures of typhoid bacteria by means of cultivation in dishes with penicillin-serum agar. The formation process of L-forms proceeds analogously both in anaerobic and aerobic conditions. The morphology of the L-forms of the typhoid

Card 1/2

USSR / Microbiology. General Microbiology. L-Forms of Microorganisms and Microorganisms of the Pleuropneumonia Type

Abs Jour : Ref. Zhur - Biol., No 21, 1958, No 94937

bacteria are similar to the morphology of L-forms of <u>Streptobacillus moniliformis</u> and to the causative agent of pleuropneumonia in cattle. The dynamics are described of the formation of these forms. By passing the L-form cultures into a 20% serum agar without penicillin, their reversion into bacilli forms is observed. Differences are shown in the formation rate of large bodies, vacuoles and granular forms depending on the concentration of penicillin in the medium. 5 mi-crophotographs.

(Survey of Literature). : The Problem of Lysogeny. Title

Orig Pub : Zh. mikrobiol., epidemiol. i immunobiol., 1957, No. 12, 82-89.

Abstract : Survey of the subject of lysogeny and transduction. In the opinion of the authors there is no great difference between

the latent (moderate) and virulent phages. In connection with this and also in view of the existence of numerous latent virus infections in nature, the authors believe that the phenomenon of lysogeny does not contradict the exogenous thec-

ry on the nature of phage. The bibliography contains 68

titles.
